* Upgrades can create problems.

Gmails Deleted With IOS 9 Update

Apple iOS 9 bug reportedly deleting emails from Google Gmail

www.ibtimes.co.uk/apple-ios-9-bug-reporte... ▾ International Business Times ▾

Sep 25, 2015 - Apple iOS 9 bug reportedly deleting emails from Google Gmail accounts ... towards a bug with Apple's recently released iOS 9 firmware update for the ... one user wrote: "Many people have reported the total loss of their email ...

You visited this page on 4/13/16.

IMAP account stopped working after upgrade to iOS 9 - problem with CAcert certifi

6

After upgrading my iPhone 6+ from iOS 8 to iOS 9, my IMAP email account stopped working. When the Mail app tries to connect to the server, it fails and displays an alert with the title "Cannot get Mail" and the message "The mail server x.y.z is not responding. Verify that you have entered the correct account info in Mail settings."

★
3

I did check the account info, and it is indeed correct. Interestingly, I do **not** get any error messages from the settings app when I try to save the account. I have tried entering wrong information on purpose (wrong username, wrong password, wrong TCP port), and whenever I do that and try to save the account, the settings app shows an alert "The IMAP server x.y.z is not responding.". So I am **really** sure that the information I have entered is correct.

Moreover, I have two other iOS devices in the household (an iPad 2 and an iPhone 4S) which are configured to use the same account and which are still on iOS 8 - from these devices the account works properly, so I also know that the problem is not something basic like the IMAP server is down.

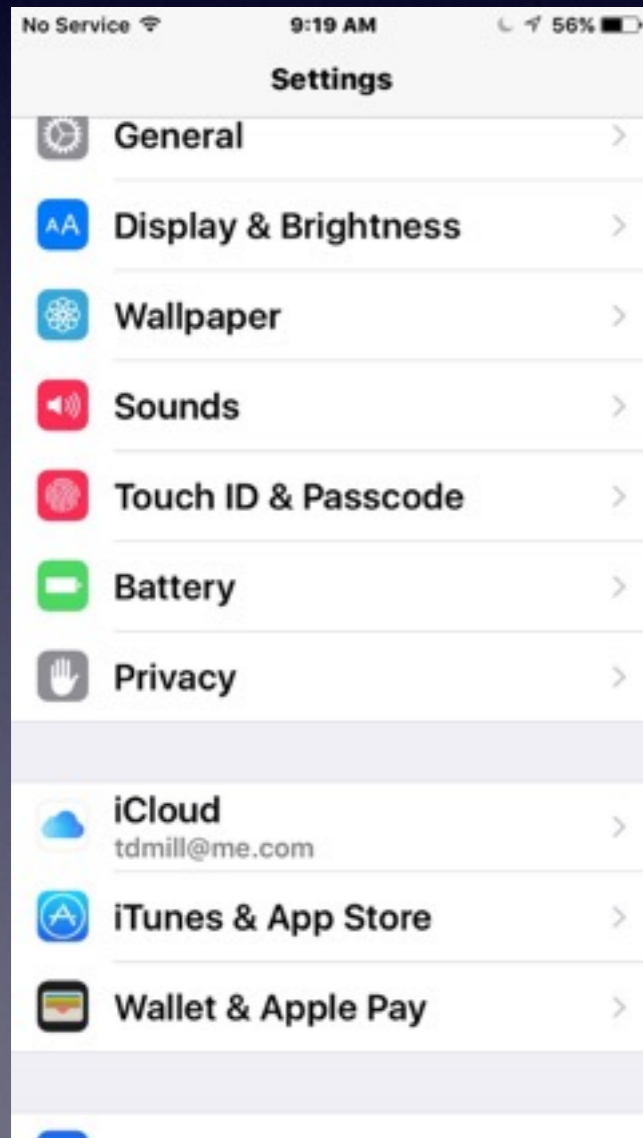

I have tried various things (see below), but without success. The only thing I know for certain is that the problem is somehow connected to TLS and/or certificates. Taking into account the information from [this AskDifferent question](#) I suspect it's a problem with the CAcert certificate, but I am not sure.

Do you know anything about changes in iOS 9 regarding the handling of certificates (untrusted or otherwise)? Or do you have other clues that might help me solve this problem?

Messages App

Getting a new iPhone?

Notice what iCloud Backs Up ... It does not back up Messages!

Notice that
iCloud
does not
back up
my
Messages!

How Does One Get All “Stuff” Back On New iPhone *[or different iPhone]*?

It is done by typing your iCloud
account and password!

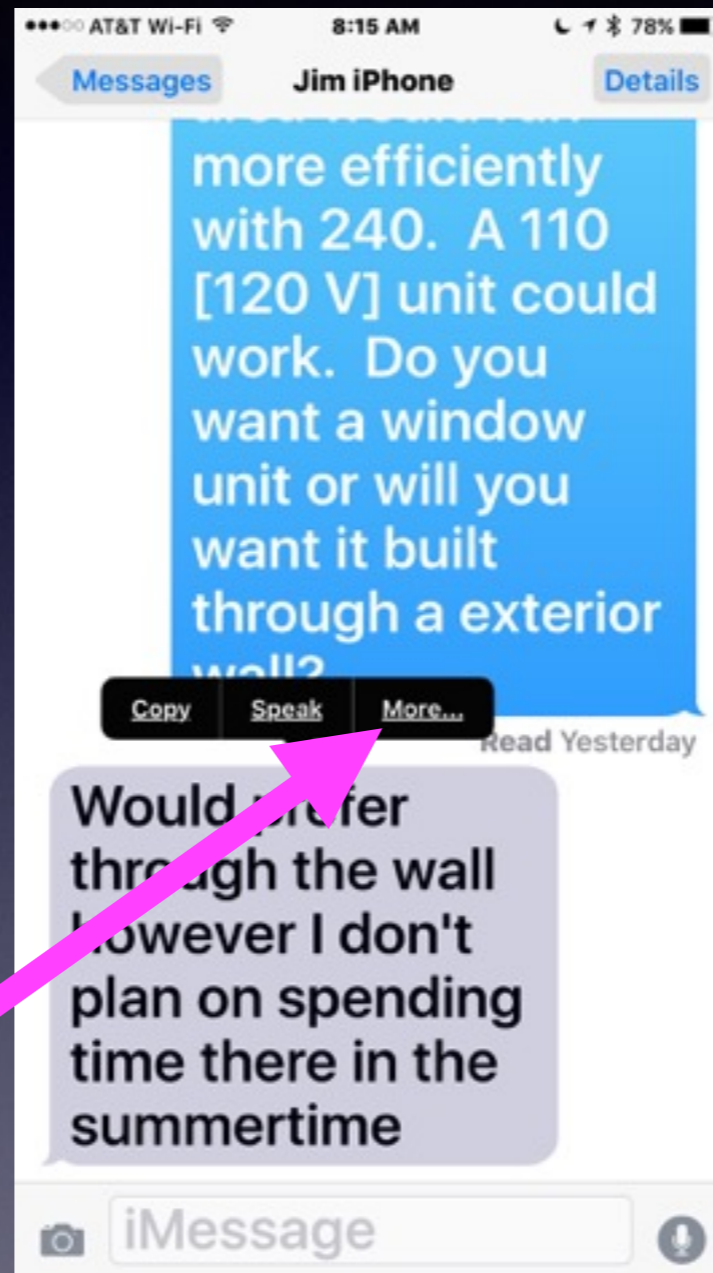

Your iCloud account is your Apple ID!

Forward a Message!

Forward a message

Touch and hold a message bubble, then tap More. Select the bubbles you want to forward then tap ➦.

How It's Done:

Back Up and Restore Data To A New or Different iPhone or iPad!

Tell the iPhone or iPad what your iCloud account is!

Look at iCloud.com

Notice that “Messages” are not there!

Go to iCloud.com and check your backup!

Look at iCloud.com *Cont.*

The image shows a screenshot of a web browser displaying the iCloud.com login page. The browser's address bar shows the URL <https://www.icloud.com> with a lock icon and the text "Apple Inc. [US]". The page has a blue-to-orange gradient background. At the top left, the word "iCloud" is visible, and at the top right, there is a link for "Setup Instructions" with a question mark icon. In the center, there is a white outline of a cloud icon above the text "Sign in to iCloud". Below this, there are two input fields: the first contains the email address "tdmill@me.com" and the second contains a masked password "....." with a right-pointing arrow icon. Underneath the password field is a checkbox labeled "Keep me signed in". Below the login fields, there are two links: "Forgot Apple ID or Password?" and "Don't have an Apple ID? Create yours now.". At the bottom left is the Apple logo, and at the bottom right is the footer text: "Check Activation Lock Status | System Status | Privacy Policy | Terms & Conditions | Copyright © 2016 Apple Inc. All rights reserved."

Look at iCloud.com *Cont.* *

You will need a computer to see iCloud.com.

**Use Your iTunes
App on a computer
and do a complete
backup.**

Then do a “Restore”

iTunes Backup/Restore

The screenshot displays the iTunes application window with the title bar indicating "Syncing 'Tom Miller's iPhone' (Step 2 of 4)" and "Copying diagnostic information". The user's name "Tom Miller" is visible in the top right corner. The main content area is divided into several sections:

- Summary:** Shows device information for "Tom Miller's iPhone" (128GB, 62% battery). It lists Capacity: 113.86 GB, Phone Number: +1 (325) 518-6662, and Serial Number: F9CQJ00JG5QP. The software version is iOS 9.3.1, with a note that it is up to date and will be checked for updates again on 4/14/16. Buttons for "Check for Update" and "Restore iPhone..." are present.
- Backups:** Contains two main sections:
 - Automatically Back Up:** Features a radio button selection for "iCloud" (selected) and "This computer". The "iCloud" option includes a description and a "Change Password..." button. The "This computer" option includes a description and an "Encrypt iPhone backup" checkbox with a sub-description.
 - Manually Back Up and Restore:** Includes a description and buttons for "Back Up Now" and "Restore Backup...".
- Options:** Features a checked checkbox for "Automatically sync when this iPhone is connected" and several unchecked checkboxes for "Sync with this iPhone over Wi-Fi", "Sync only checked songs and videos", "Prefer standard definition videos", "Convert higher bit rate songs to" (set to 128 kbps), and "Manually manage music and videos". It also includes buttons for "Reset Warnings" and "Configure Accessibility...".

At the bottom of the window, a progress bar shows the sync status for "Audio", "Photos", "Apps", and "Other", with "17.31 GB Free" remaining and a "Sync" button.

The Most Important Button!

The Home Button

The Home Button serves many functions.

How you hold it?

How many times you depress it?

Where you are when you depress it?

The Home Button Cont.
