

Autocorrect Can Be Frustrating!

A priest, a rabbit, and a minister walk into a bar.
The bartender asks the rabbit, "What will you have?"
The rabbit shakes his head and answers, "I have no idea, the only reason that I am here is because of Autocorrect."

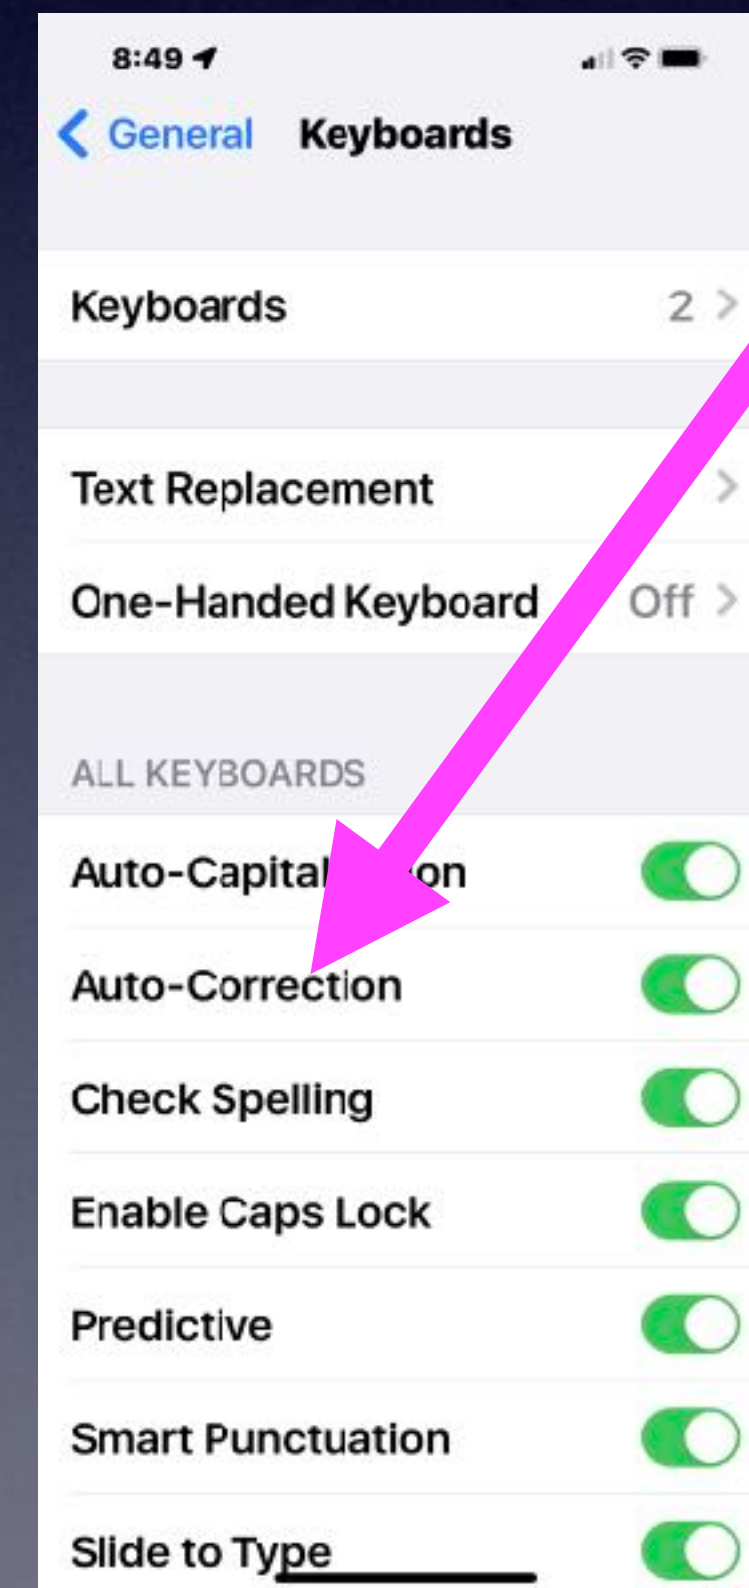

How to turn off autocorrect completely

Open Settings on your iPhone.

Tap General.

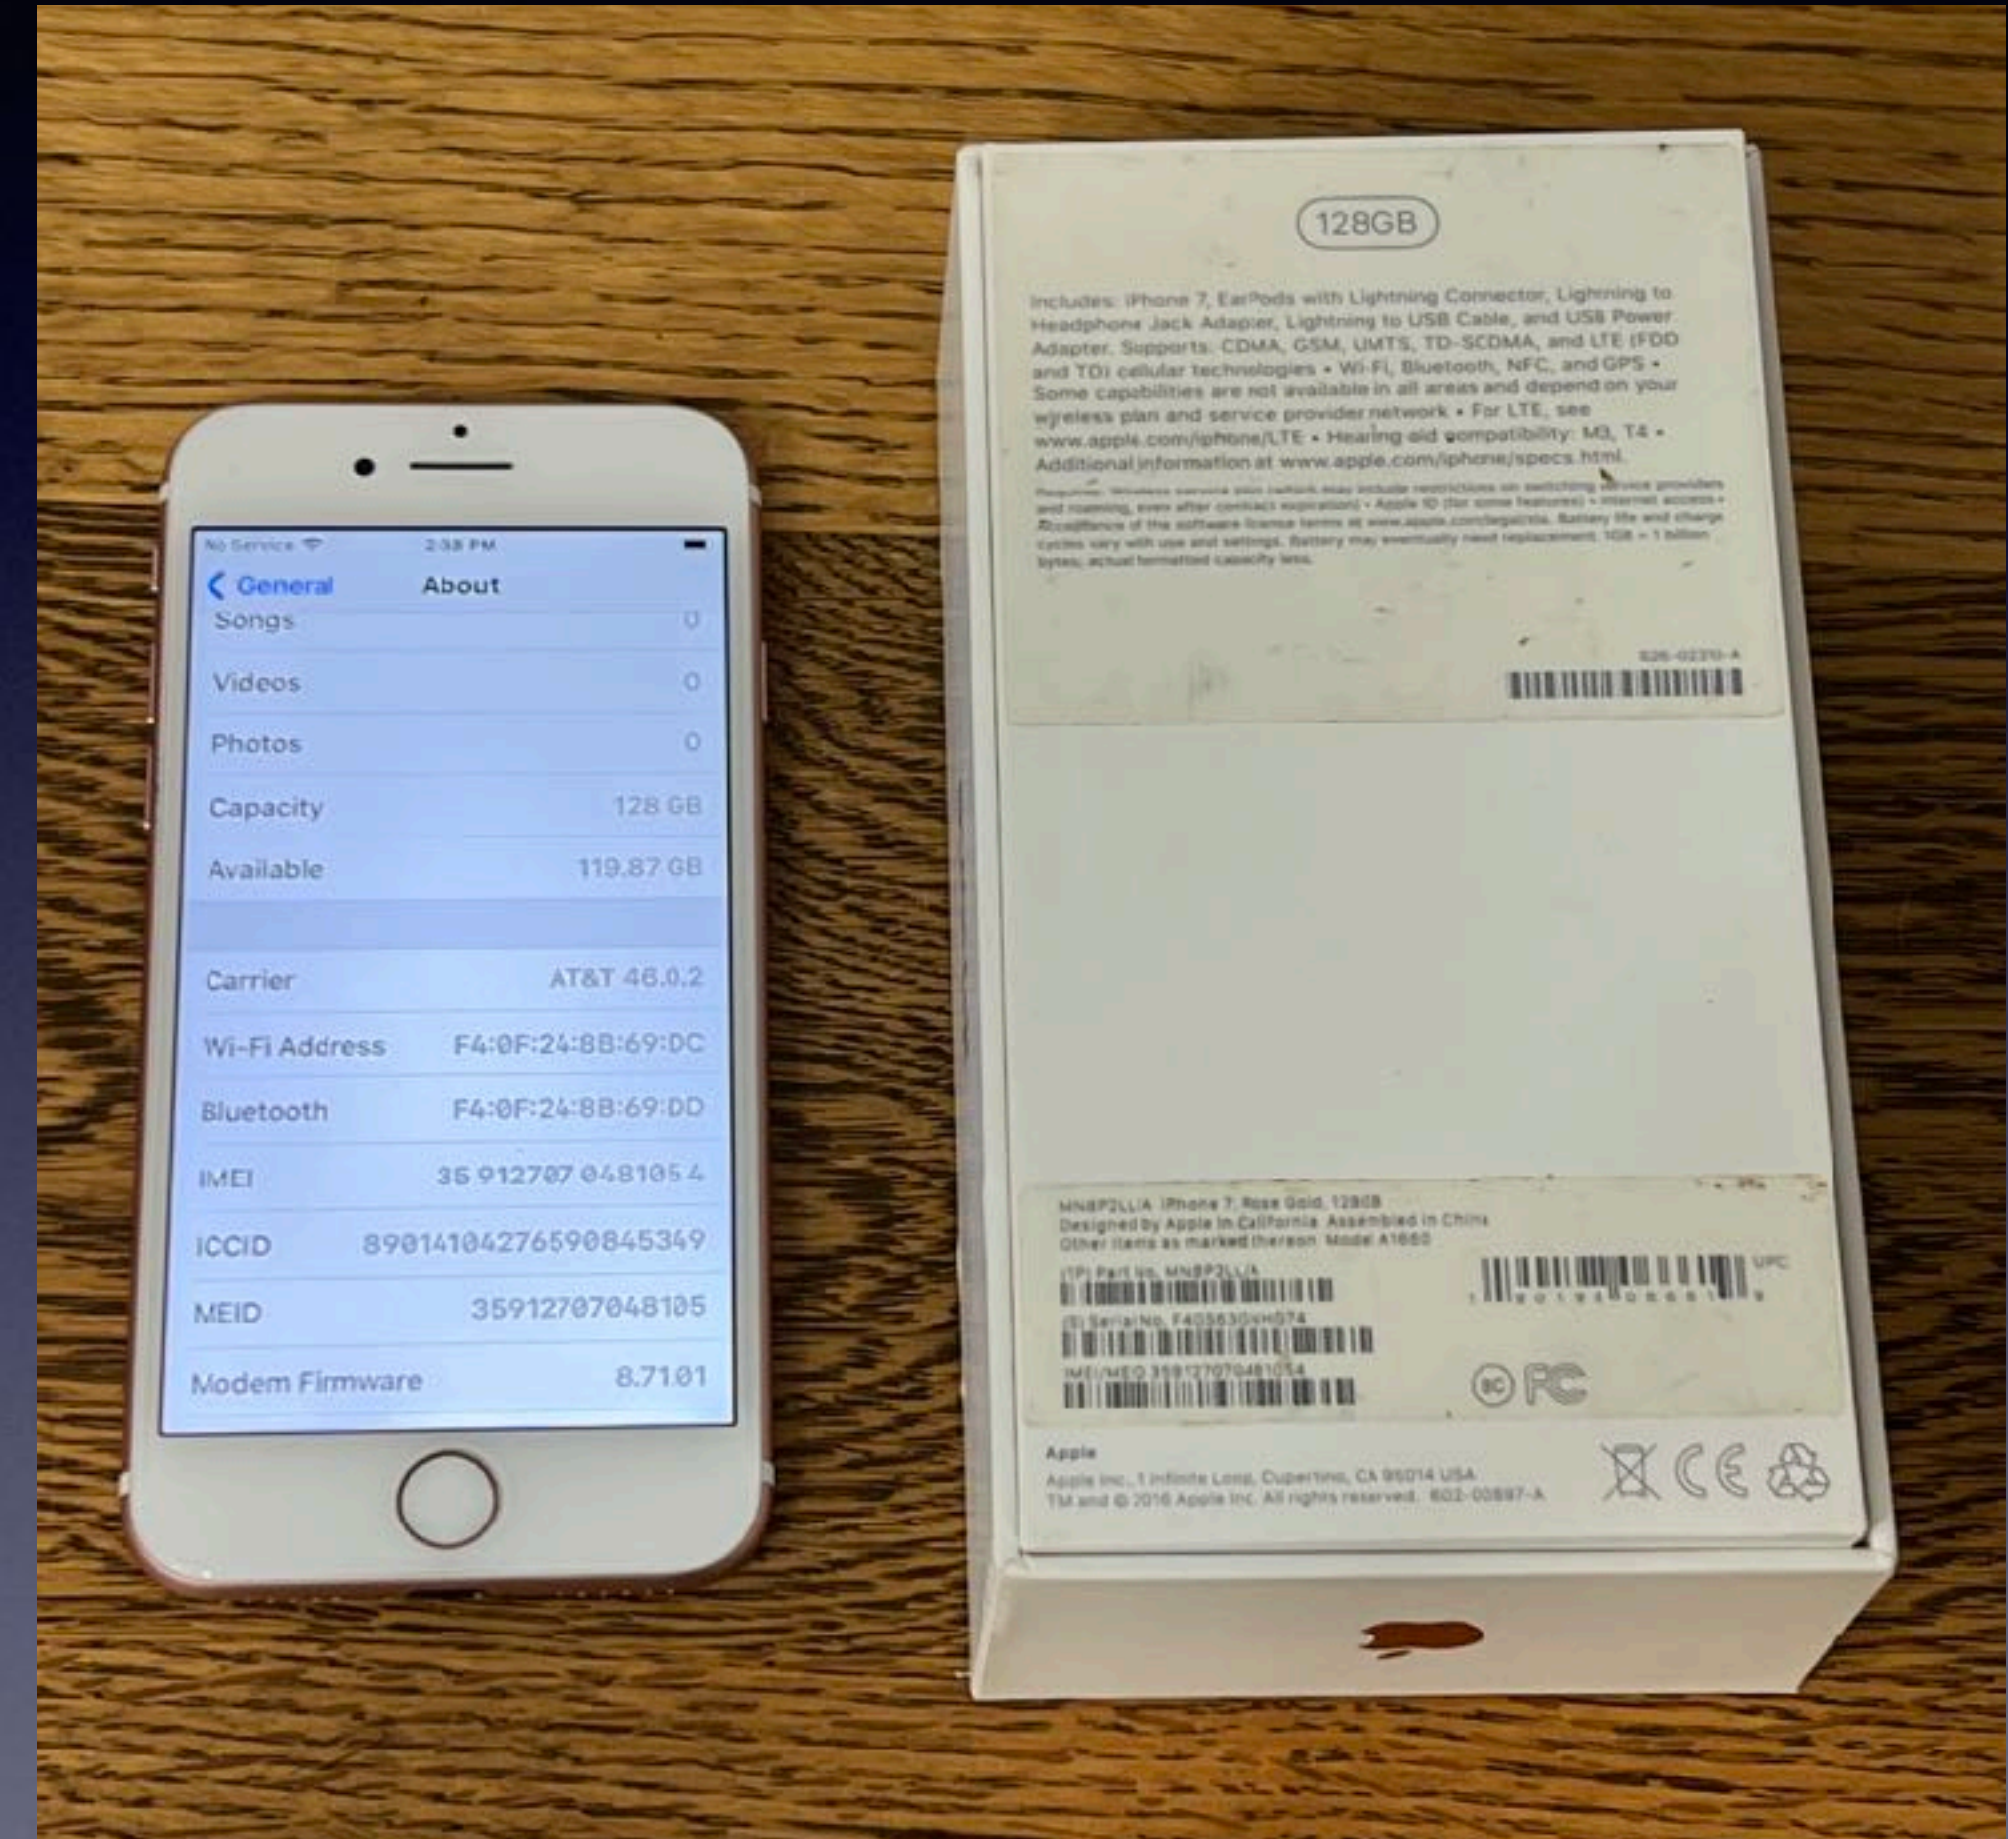

Tap Keyboard.

Toggle the option for "Auto-Correction" so that it's off.

This is a learning class...some things may be new to you. Learning (a foreign language) is not easy.

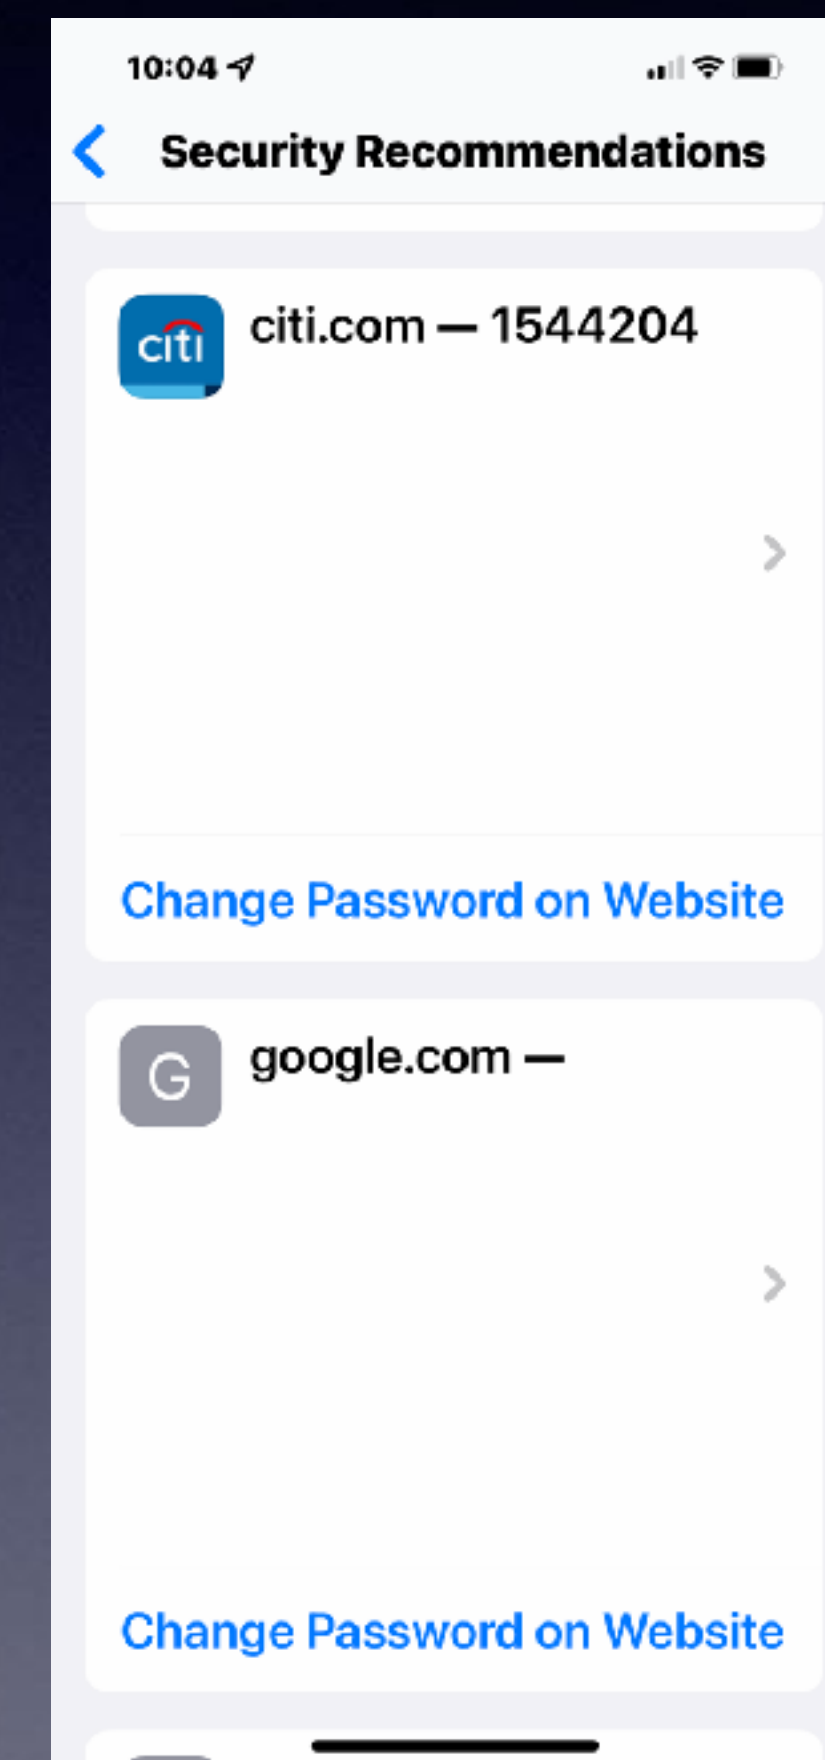

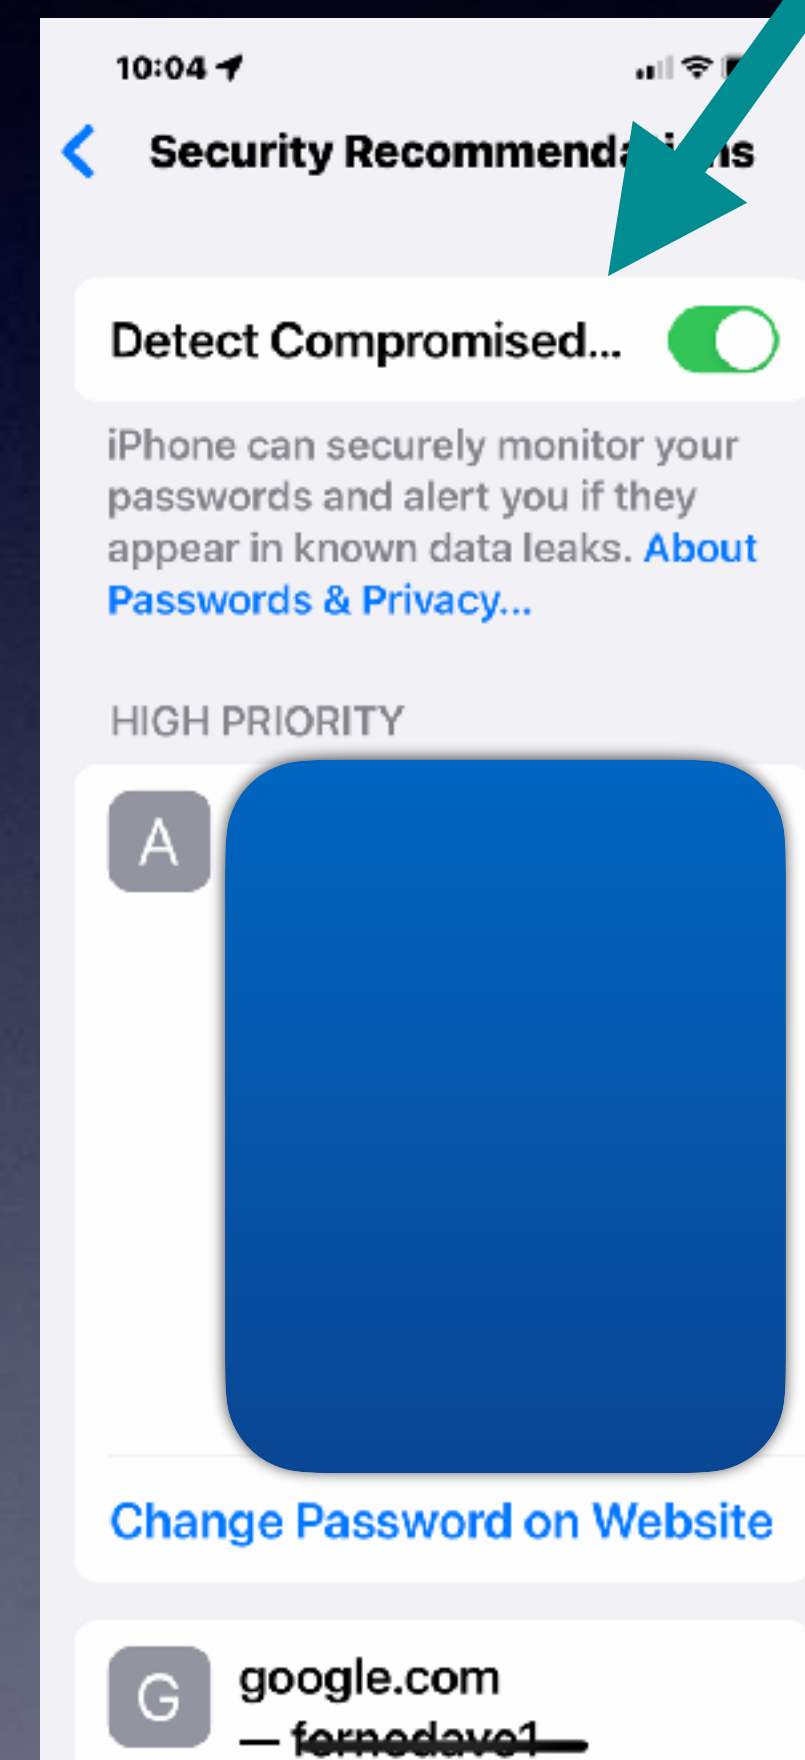

Change Passwords Regularly!

Apple will give you a warning to change your passwords.

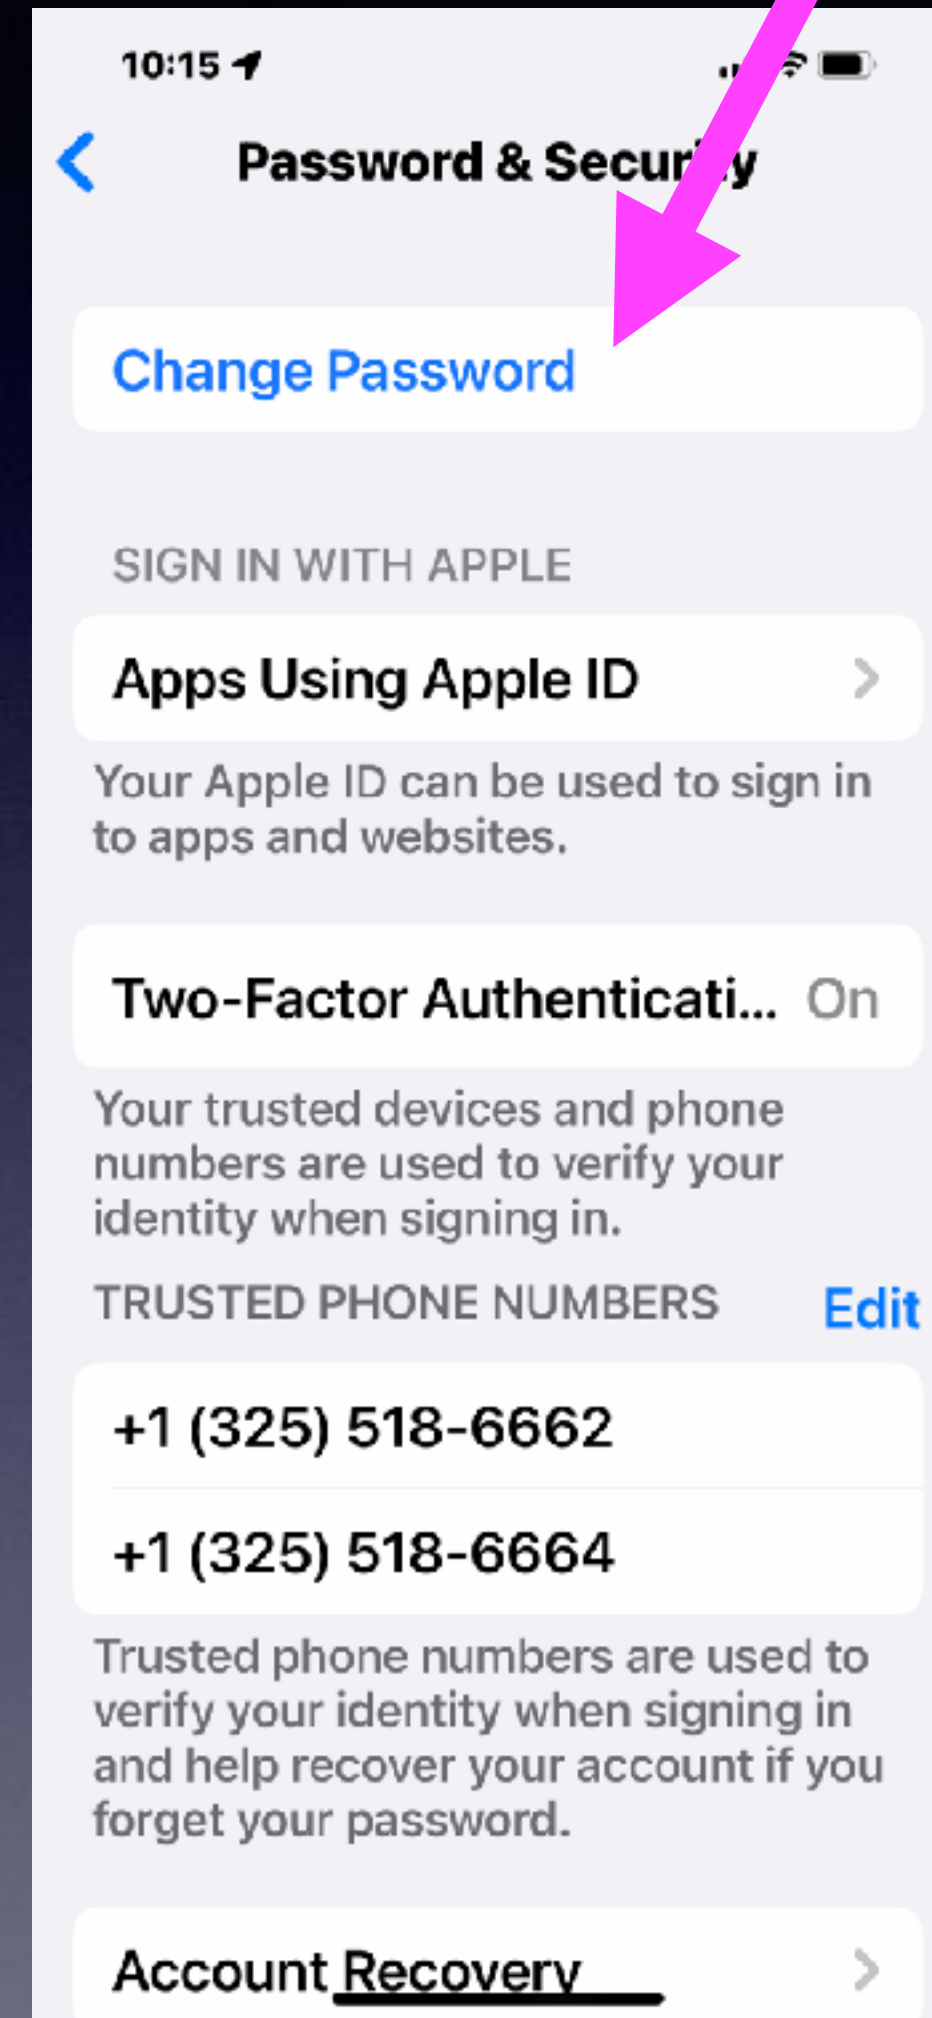

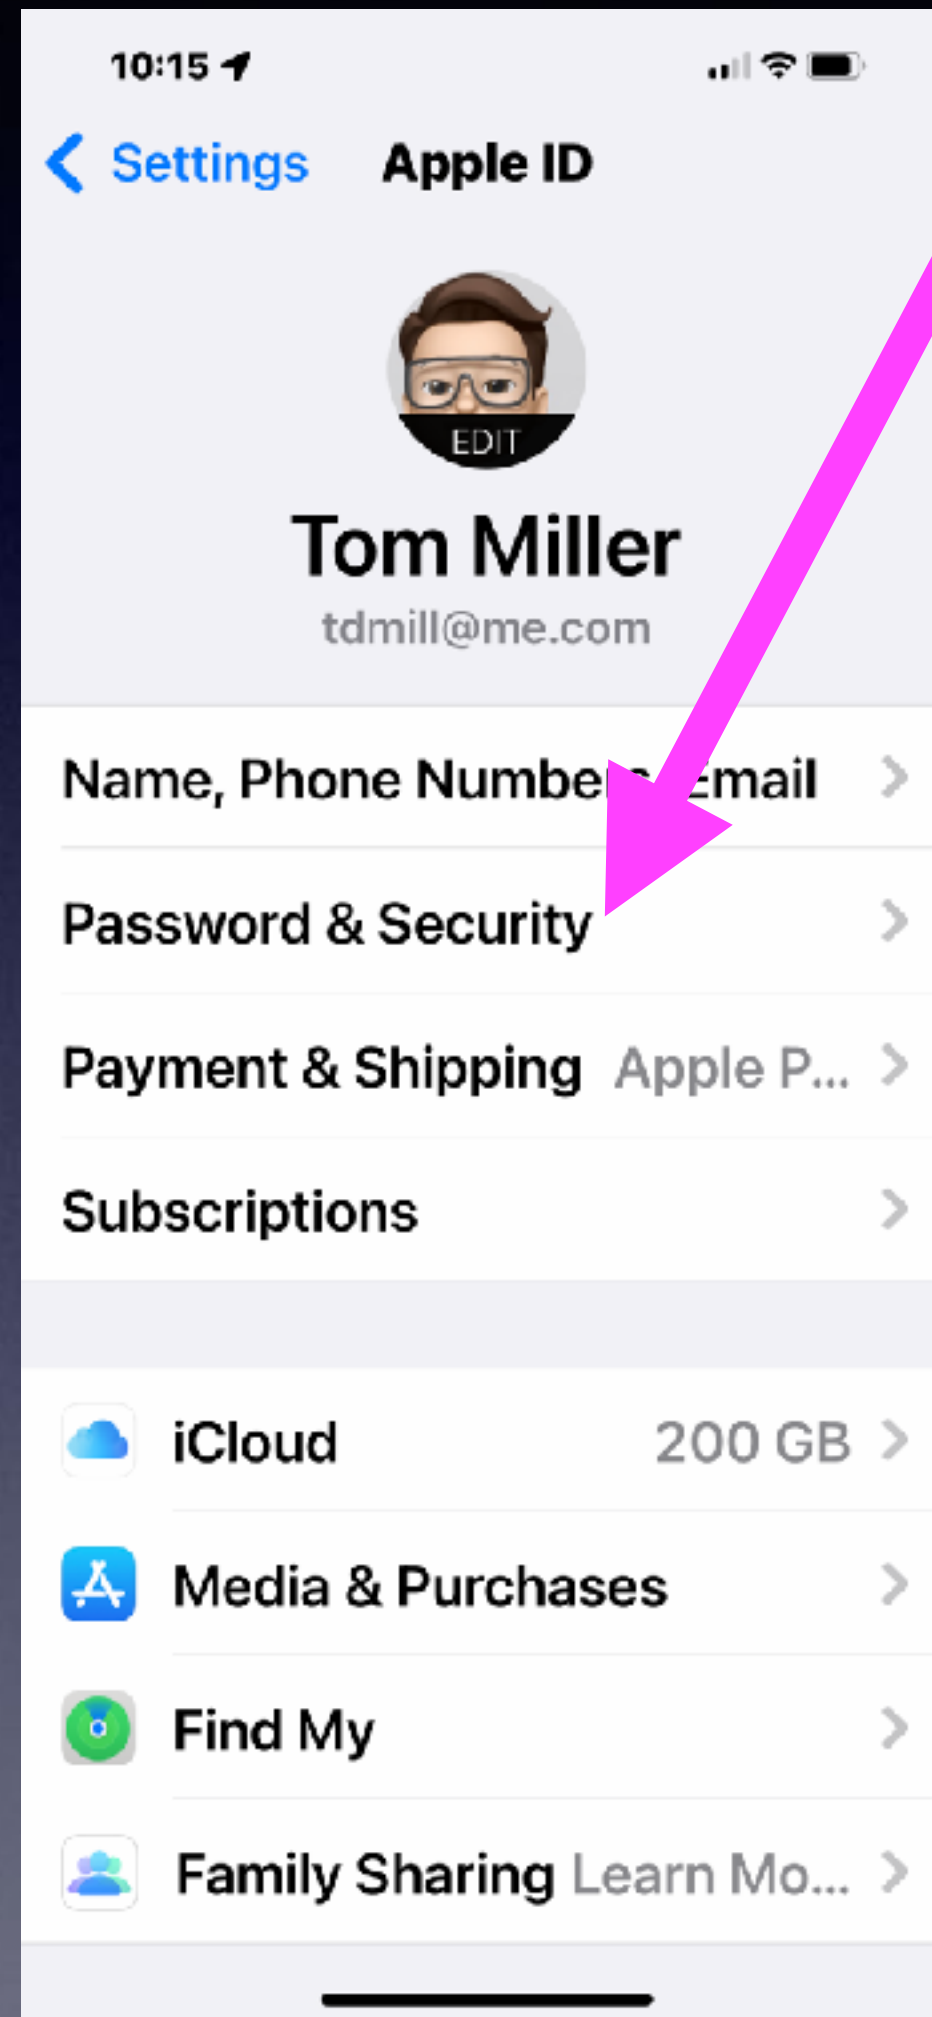

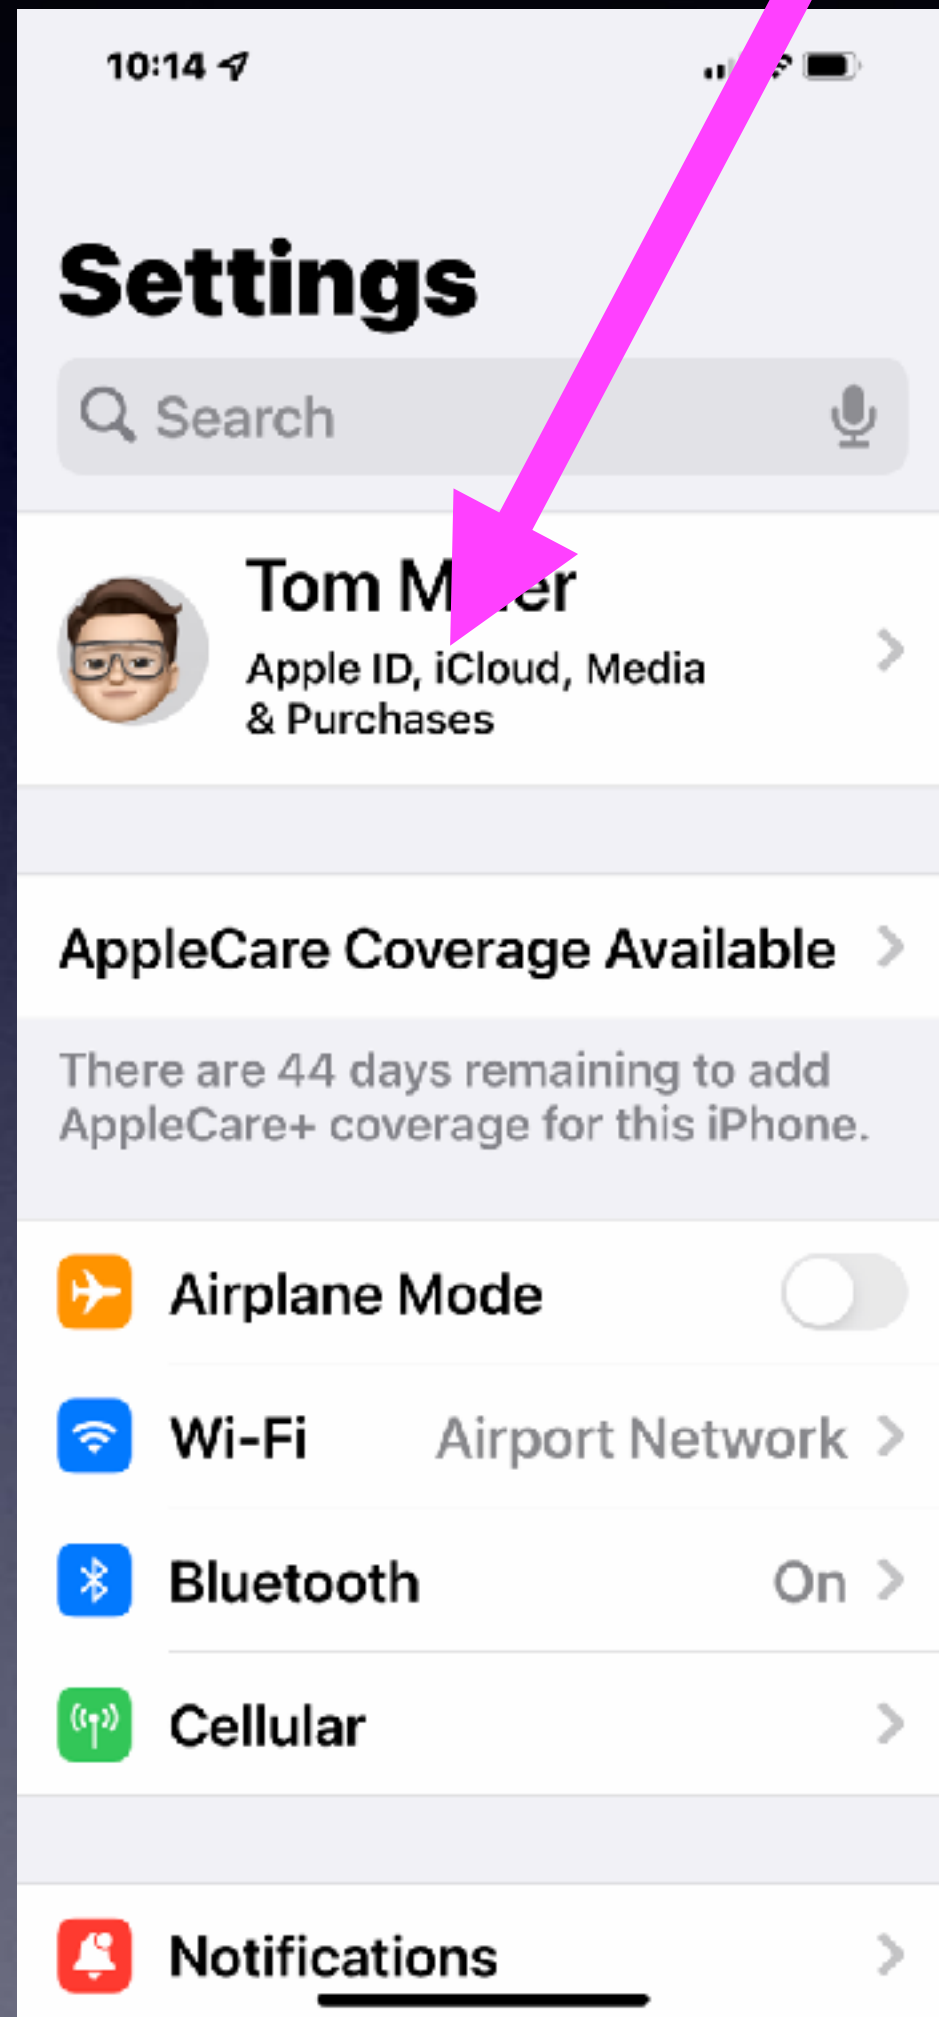

You can turn this off this warning!

You will be warned about your passwords determined to possibly be in a data breach. Your actual passwords are never shared with Apple, and Apple does not store the information calculated from your passwords. You can disable this feature at any time by going to Settings > Passwords > Security Recommendations.

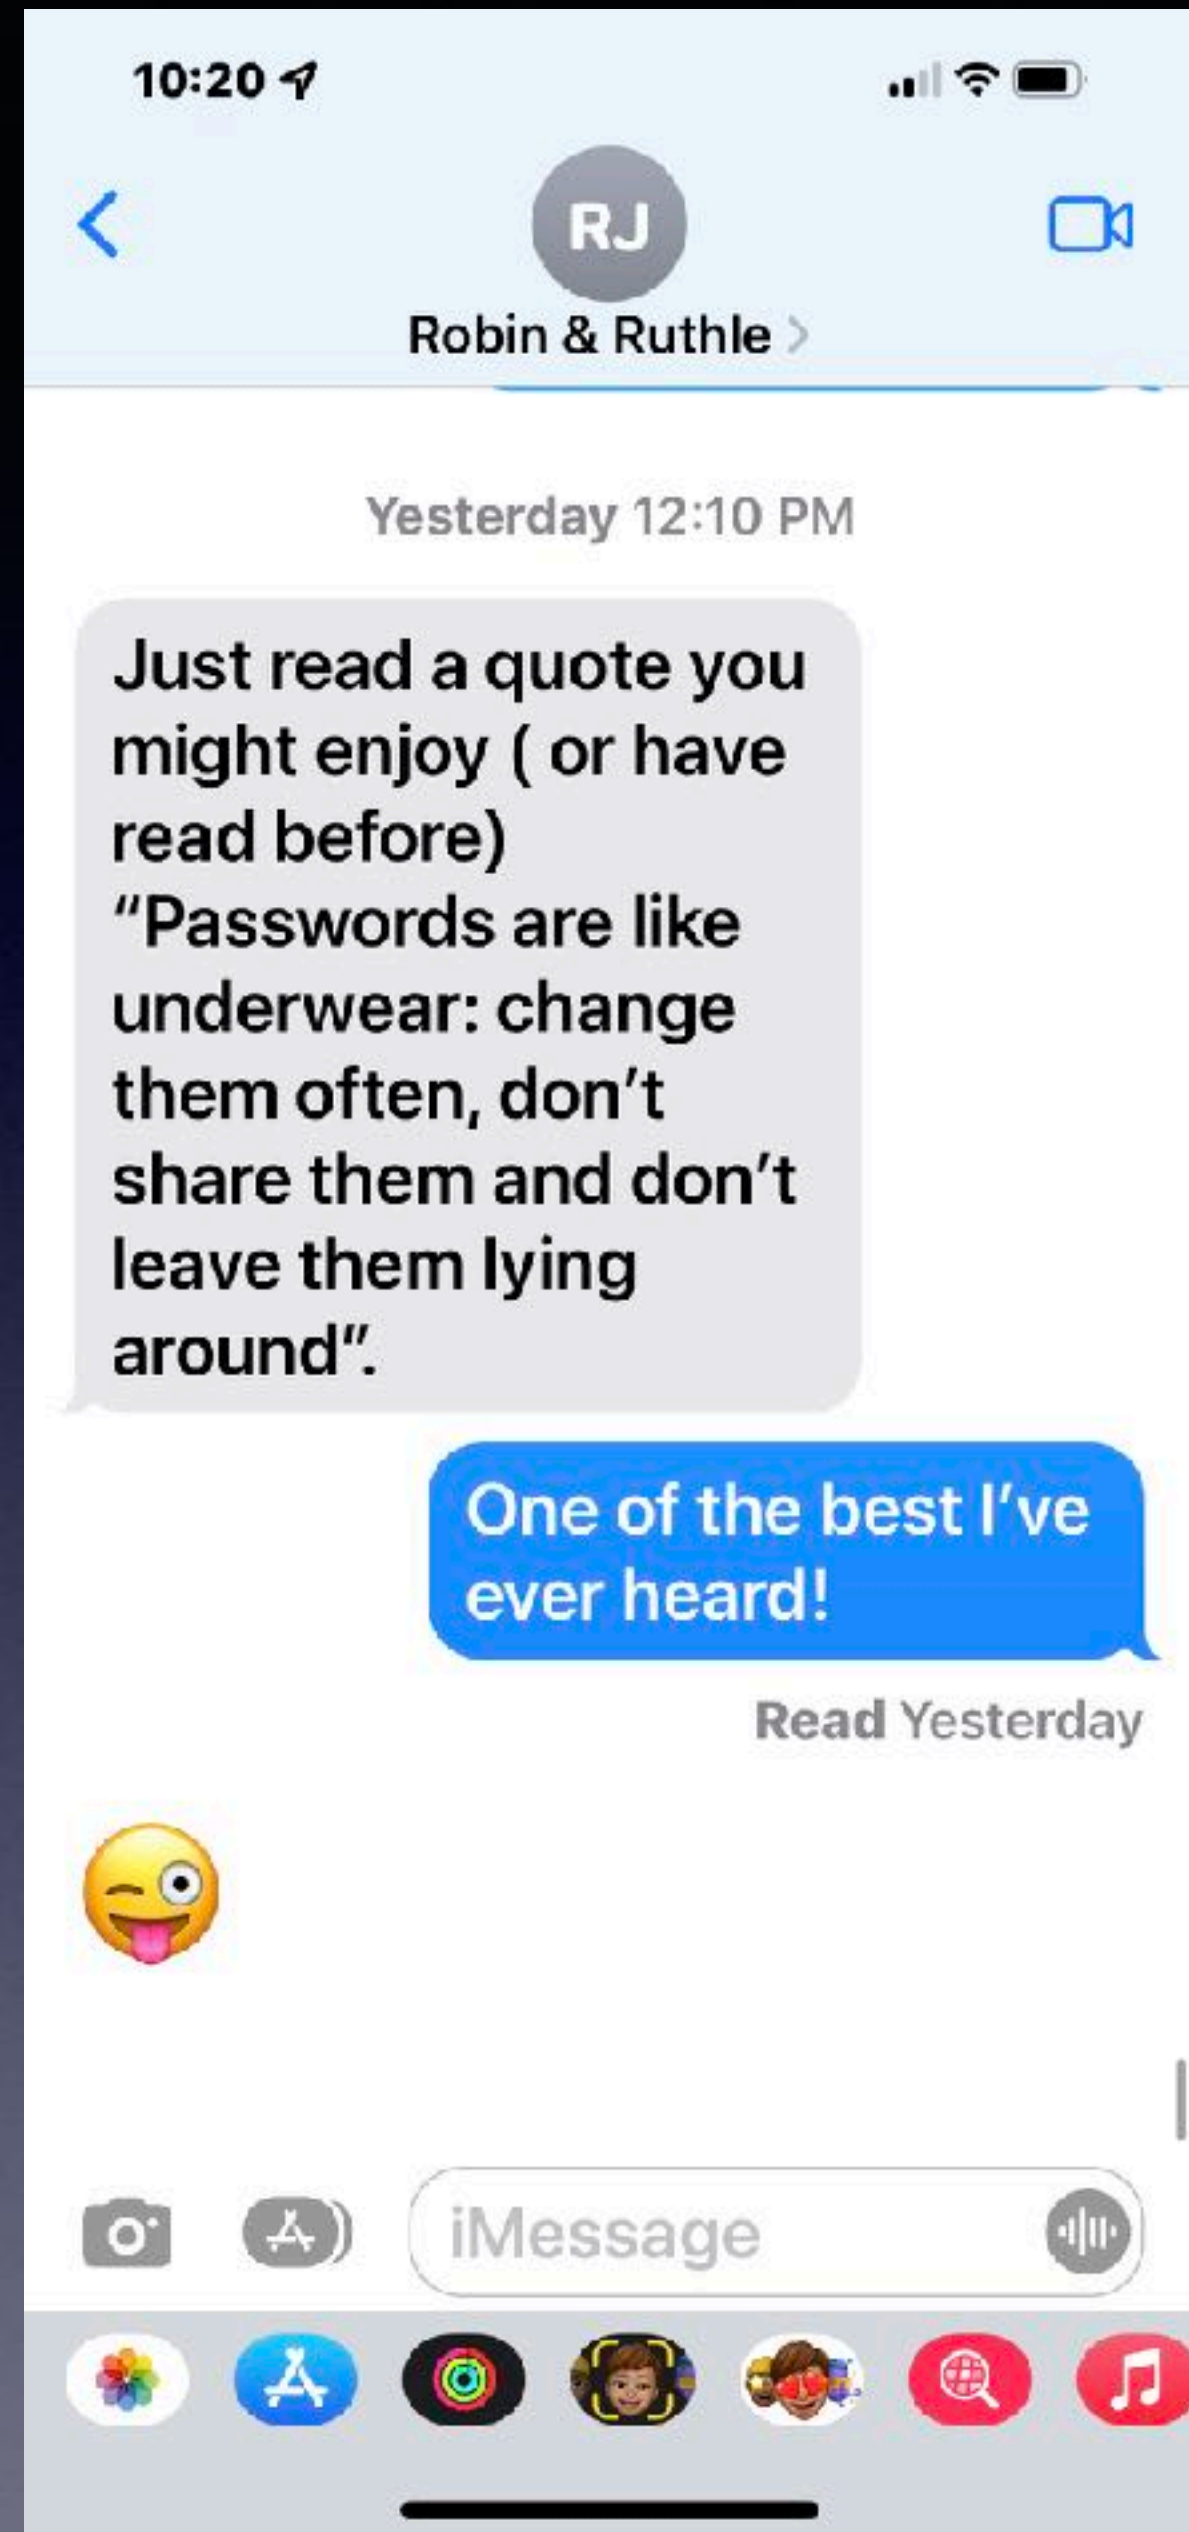

Password monitoring is a built-in feature of iCloud Keychain, which stores and auto-fills account information on your Apple devices. ... When one of your passwords matches a password found in a data leak, your iPhone will send you a notification with the title Compromised Passwords

The Easiest Password To Change...

You don't have to know your existing password!

Best Advice Concerning Passwords!*

Password Fails!

Keeping them on paper.
Keeping post it notes on
computer.

Having a file called "Passwords".

Wireless doorbell require a 10 character password.

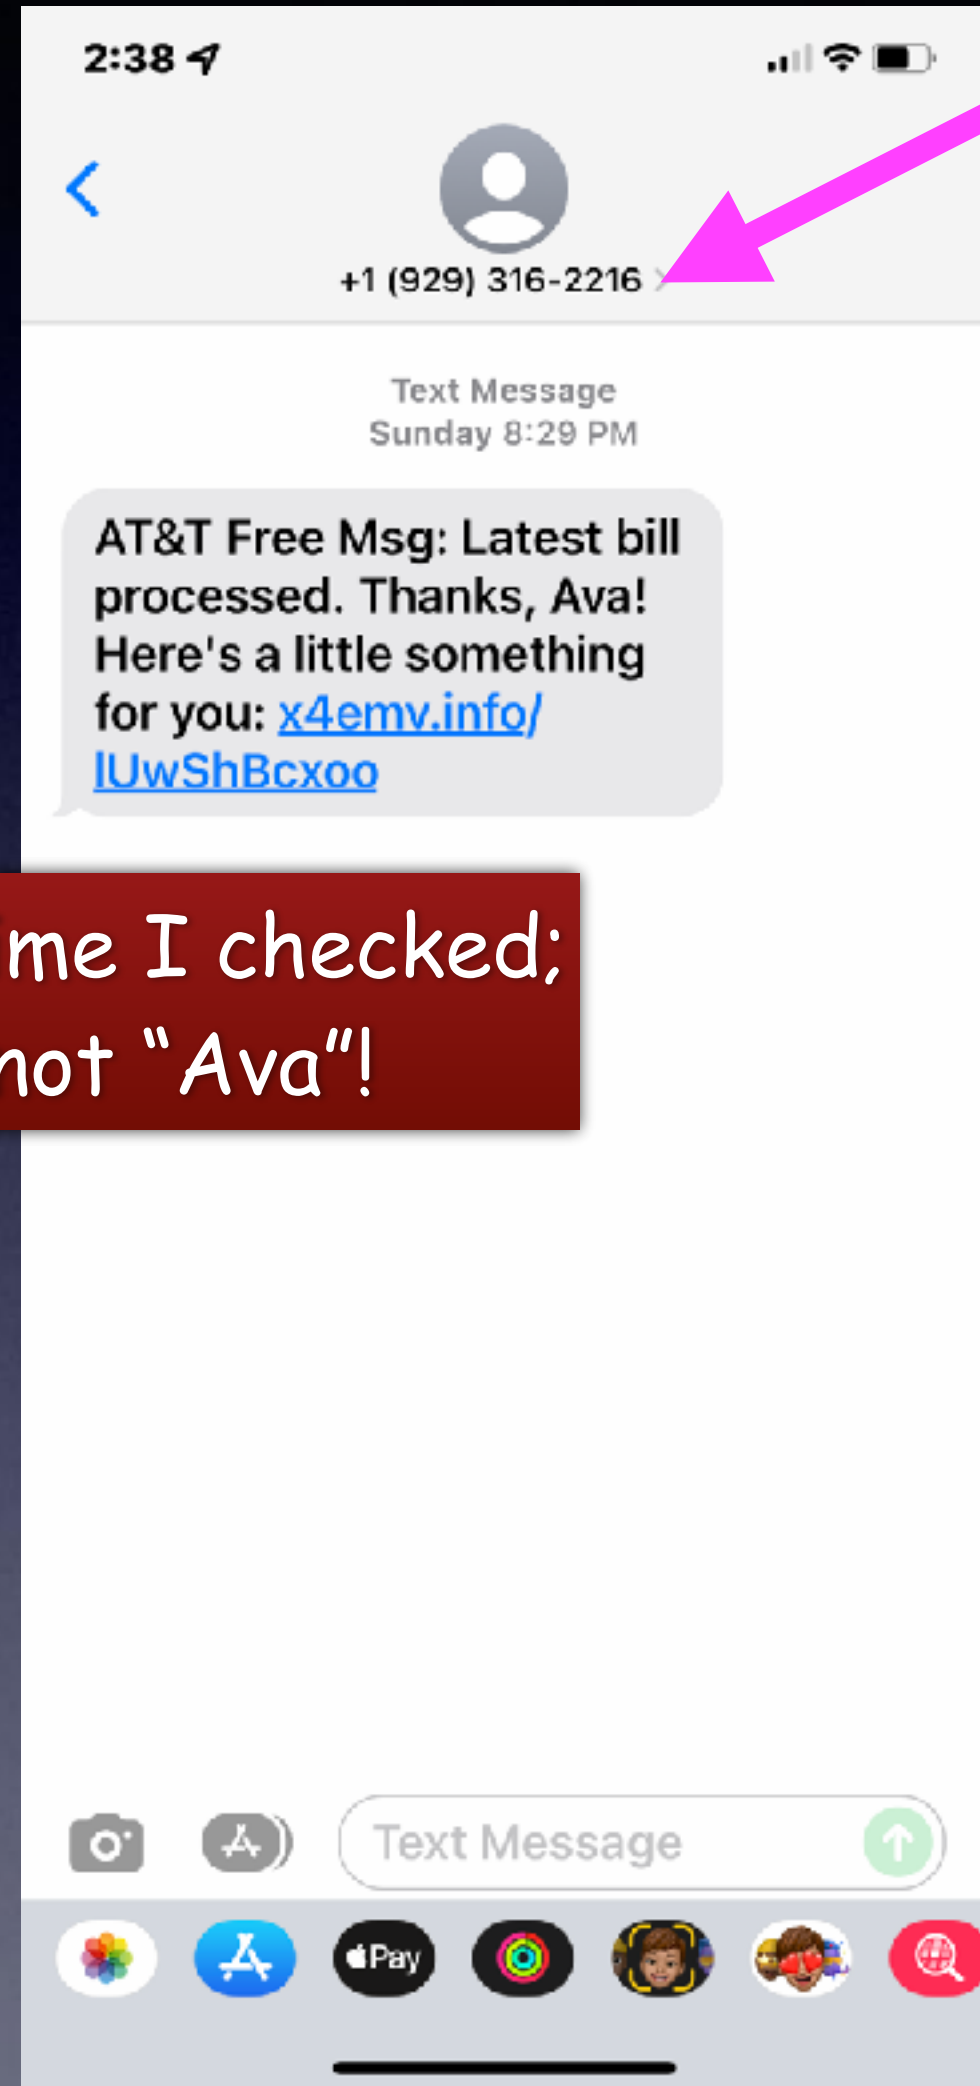

Bad Things You Should Not Do!

Super computers can figure out this stuff! (and quickly)

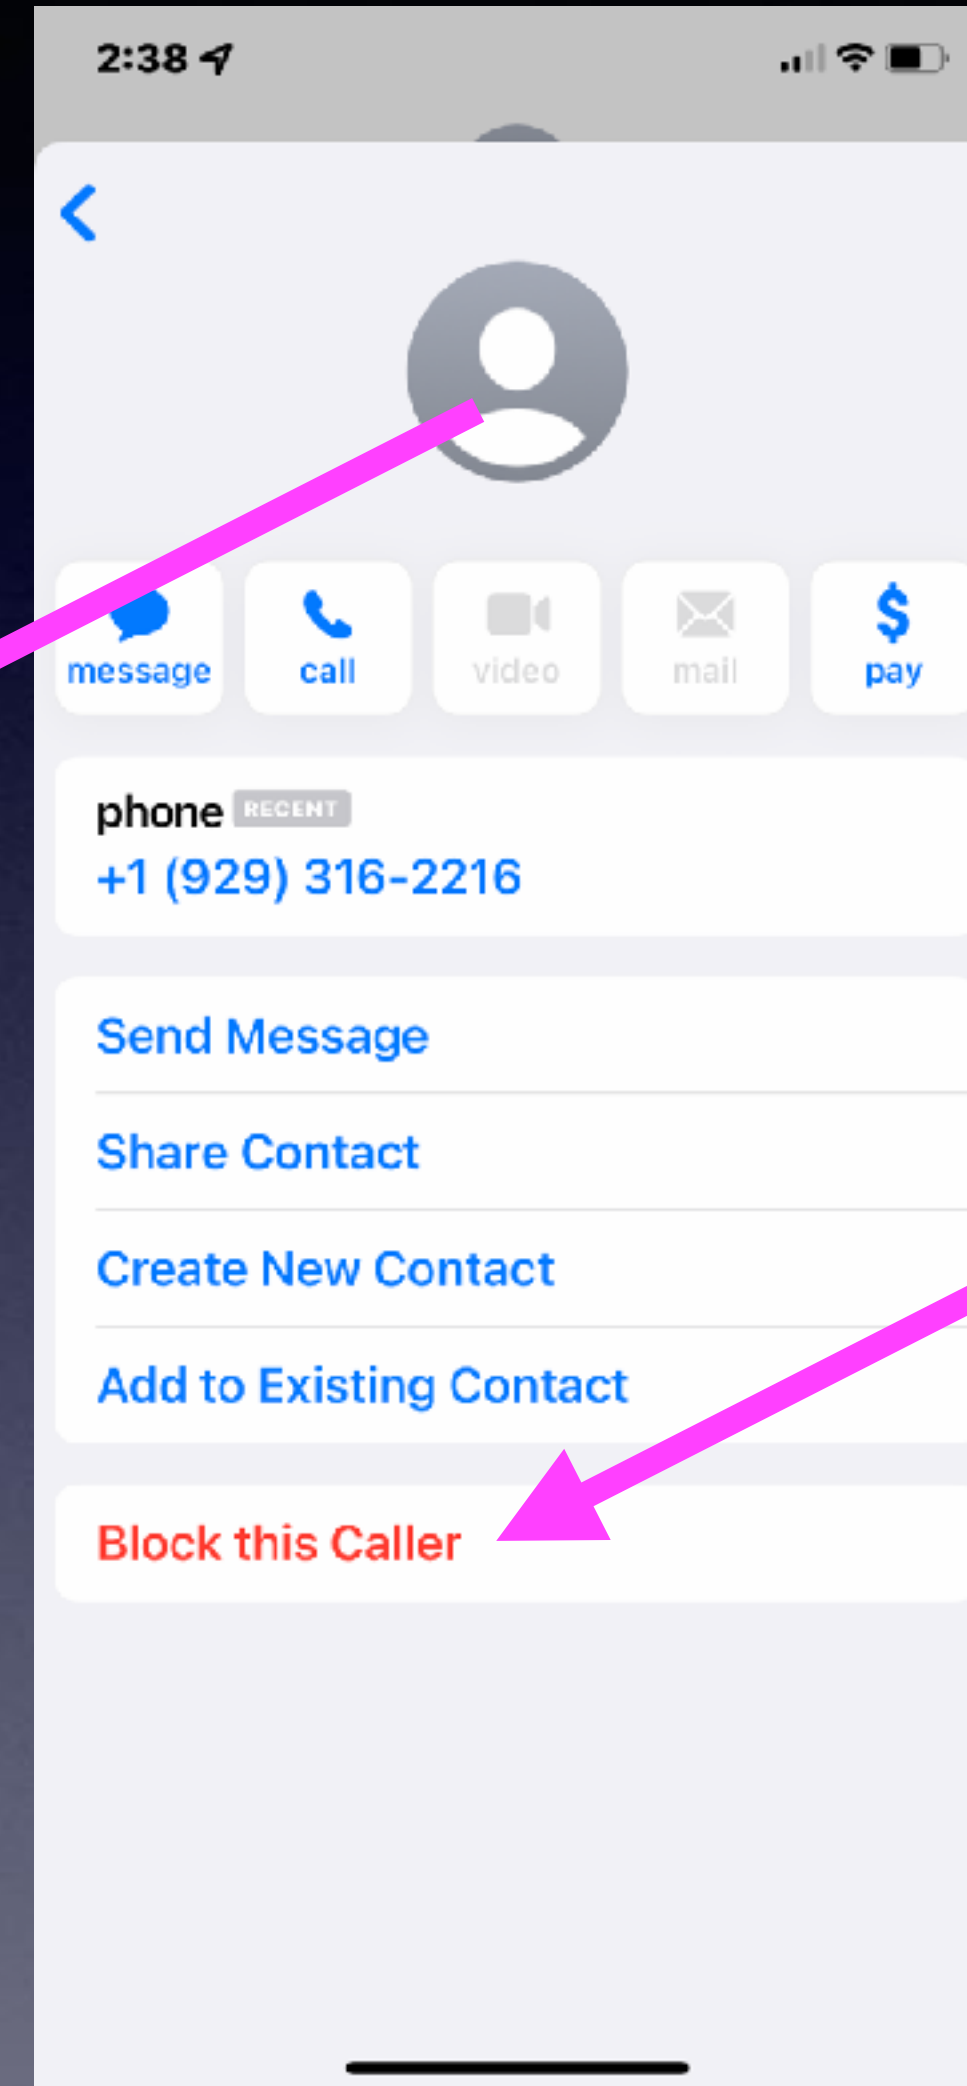

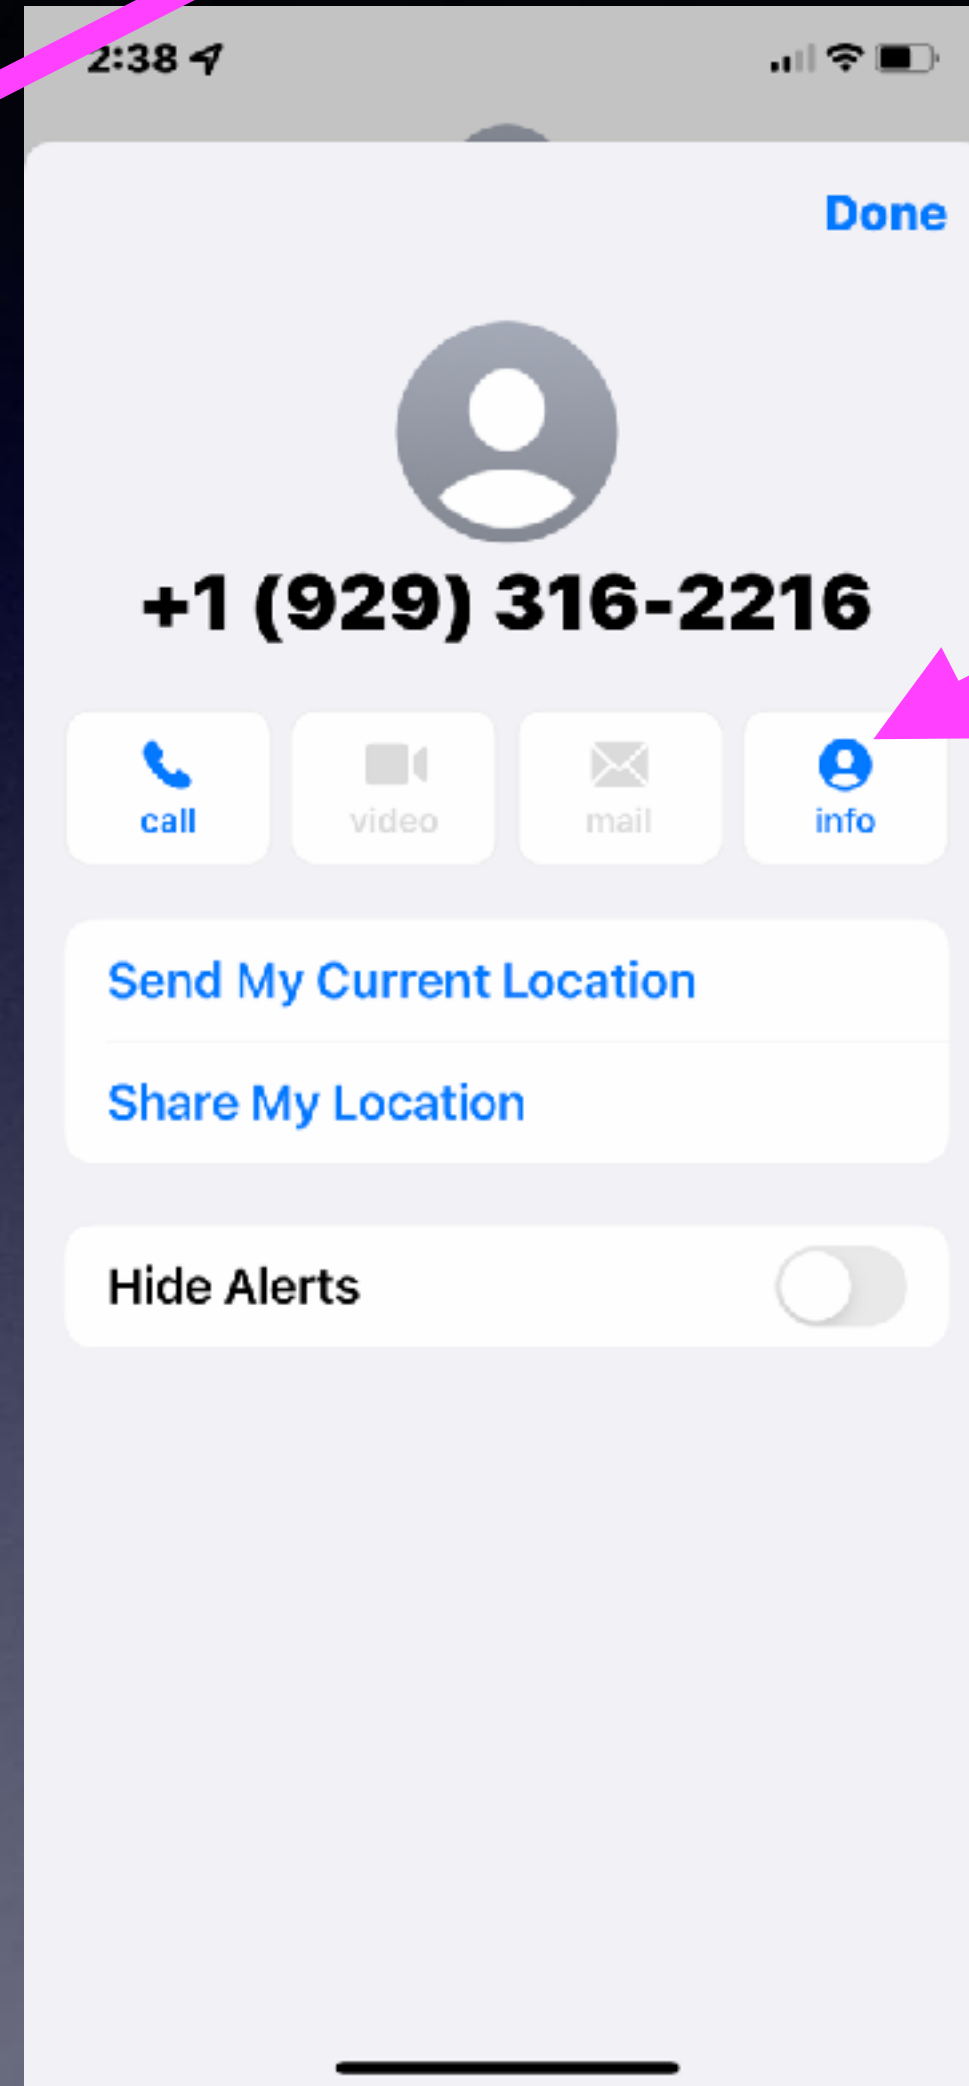

1. 1234, Password, 5555, iloveyou, 123456
2. Common things: Monday, blue, football, apple, Mary
3. Capitalizing the first letter! Orange
4. Adding a number to the end. Jim45
5. Adding special characters (&) in common places! N@sh

The length of the password is important, but so is the range of characters used. For example, a five-character alphabetic password with just lower case letters has nearly 12 million possible combinations (26^5). Make it upper and lower case and it goes to over 380 million (52^5). If the hacker is pretty certain that the first character will be uppercase, then he or she has cut in **half** the maximum number of guesses they need to make in order to hack into your account.

Everyday Someone Is Trying To Scam You!

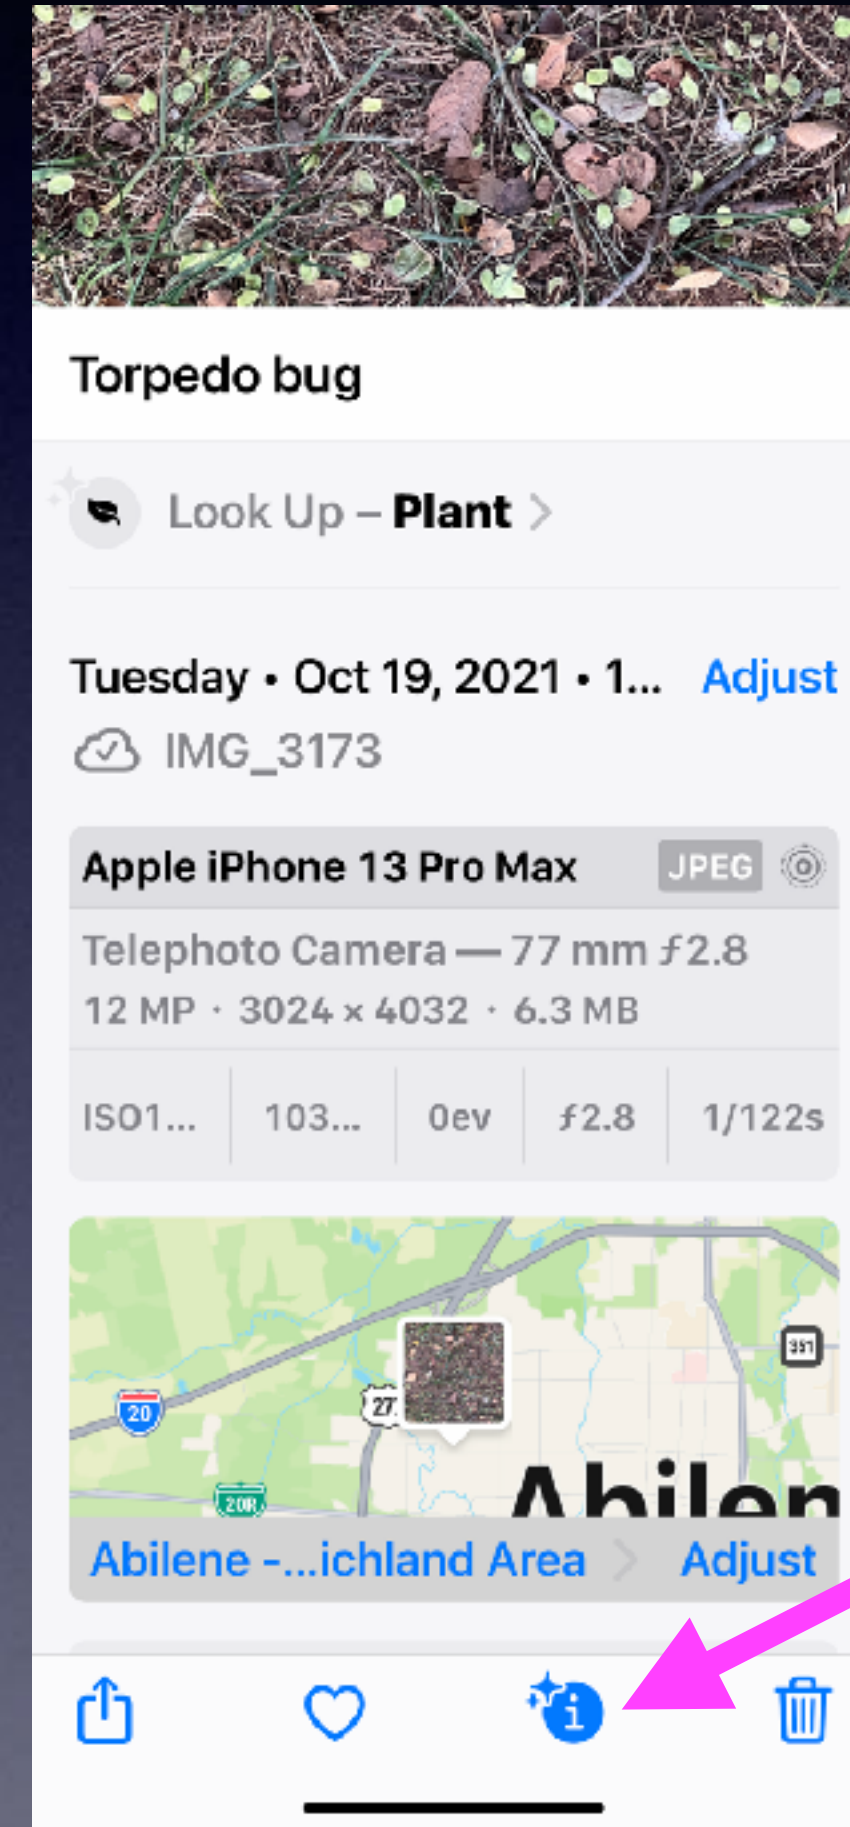

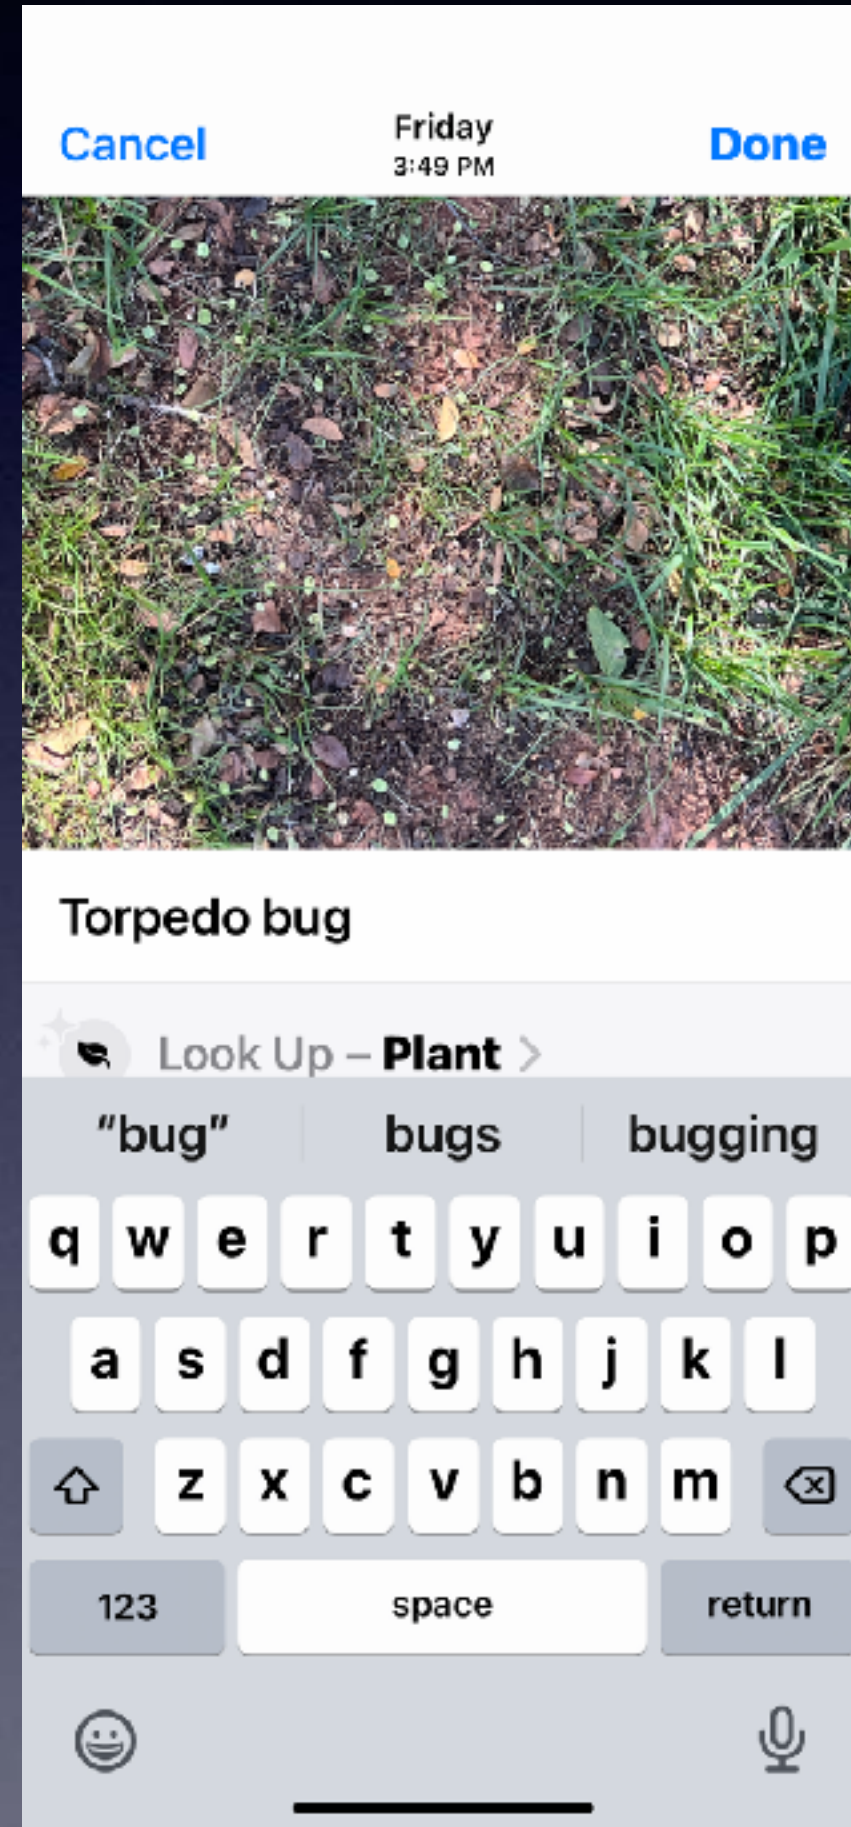

The last time I checked;
I am not "Ava"!

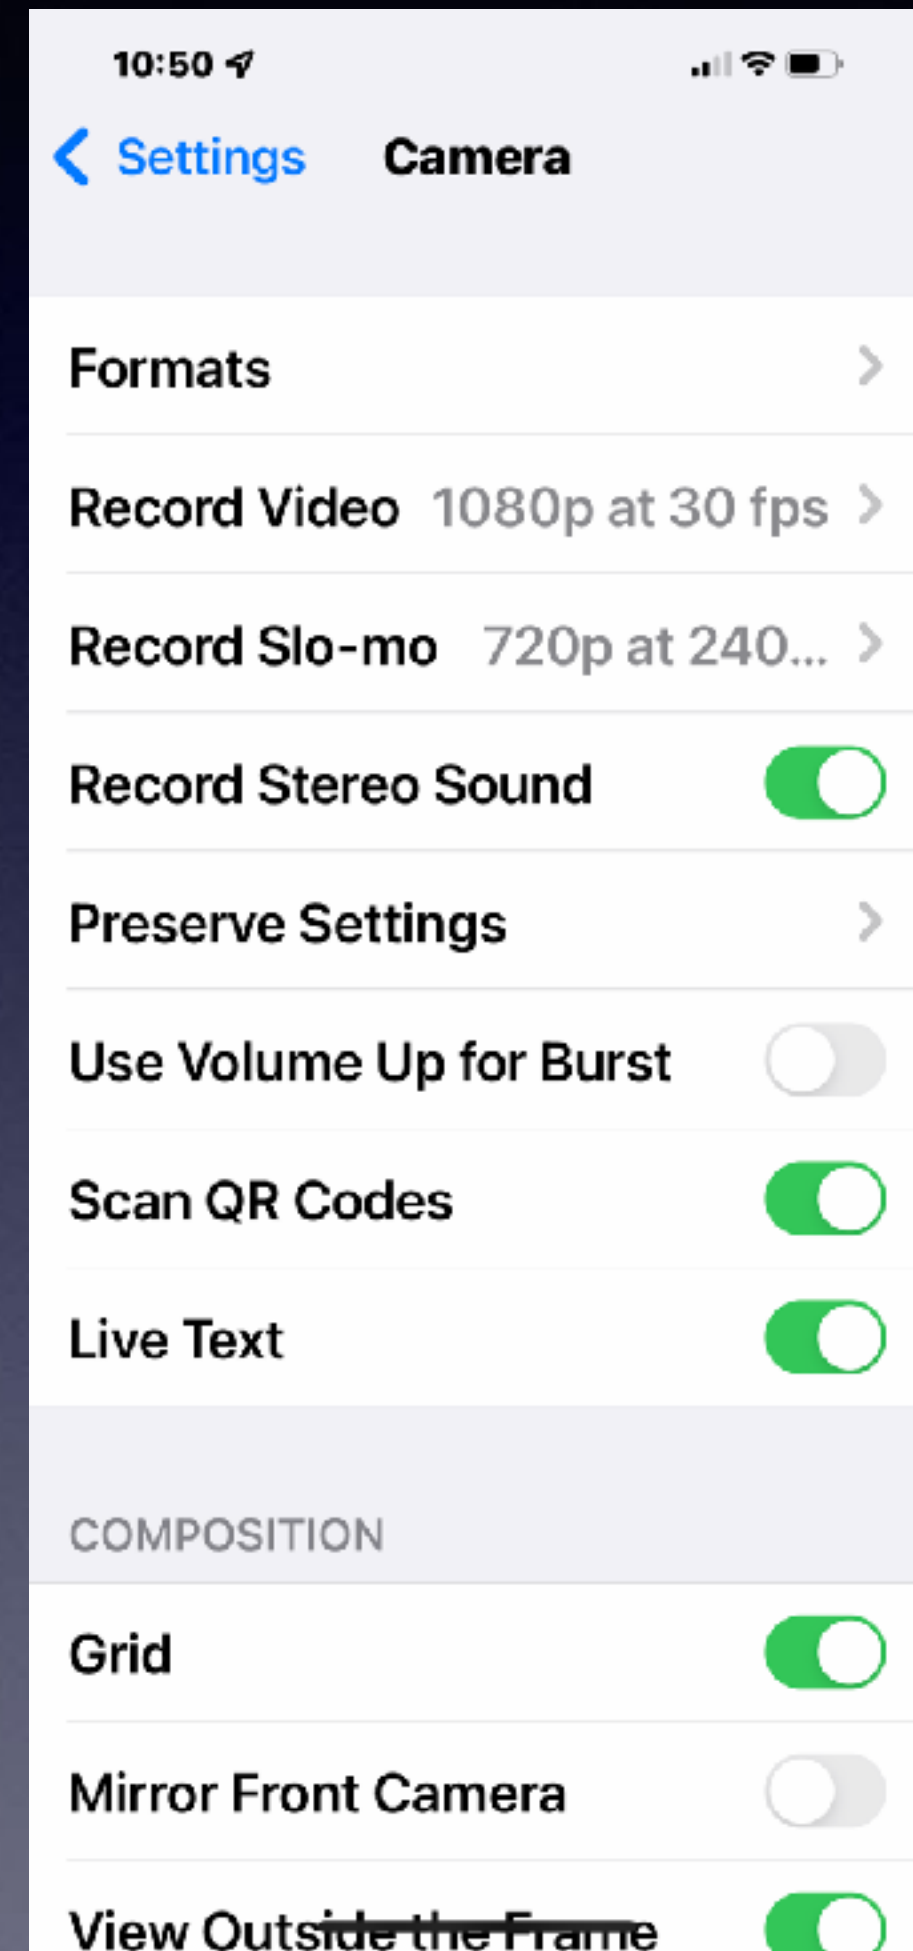

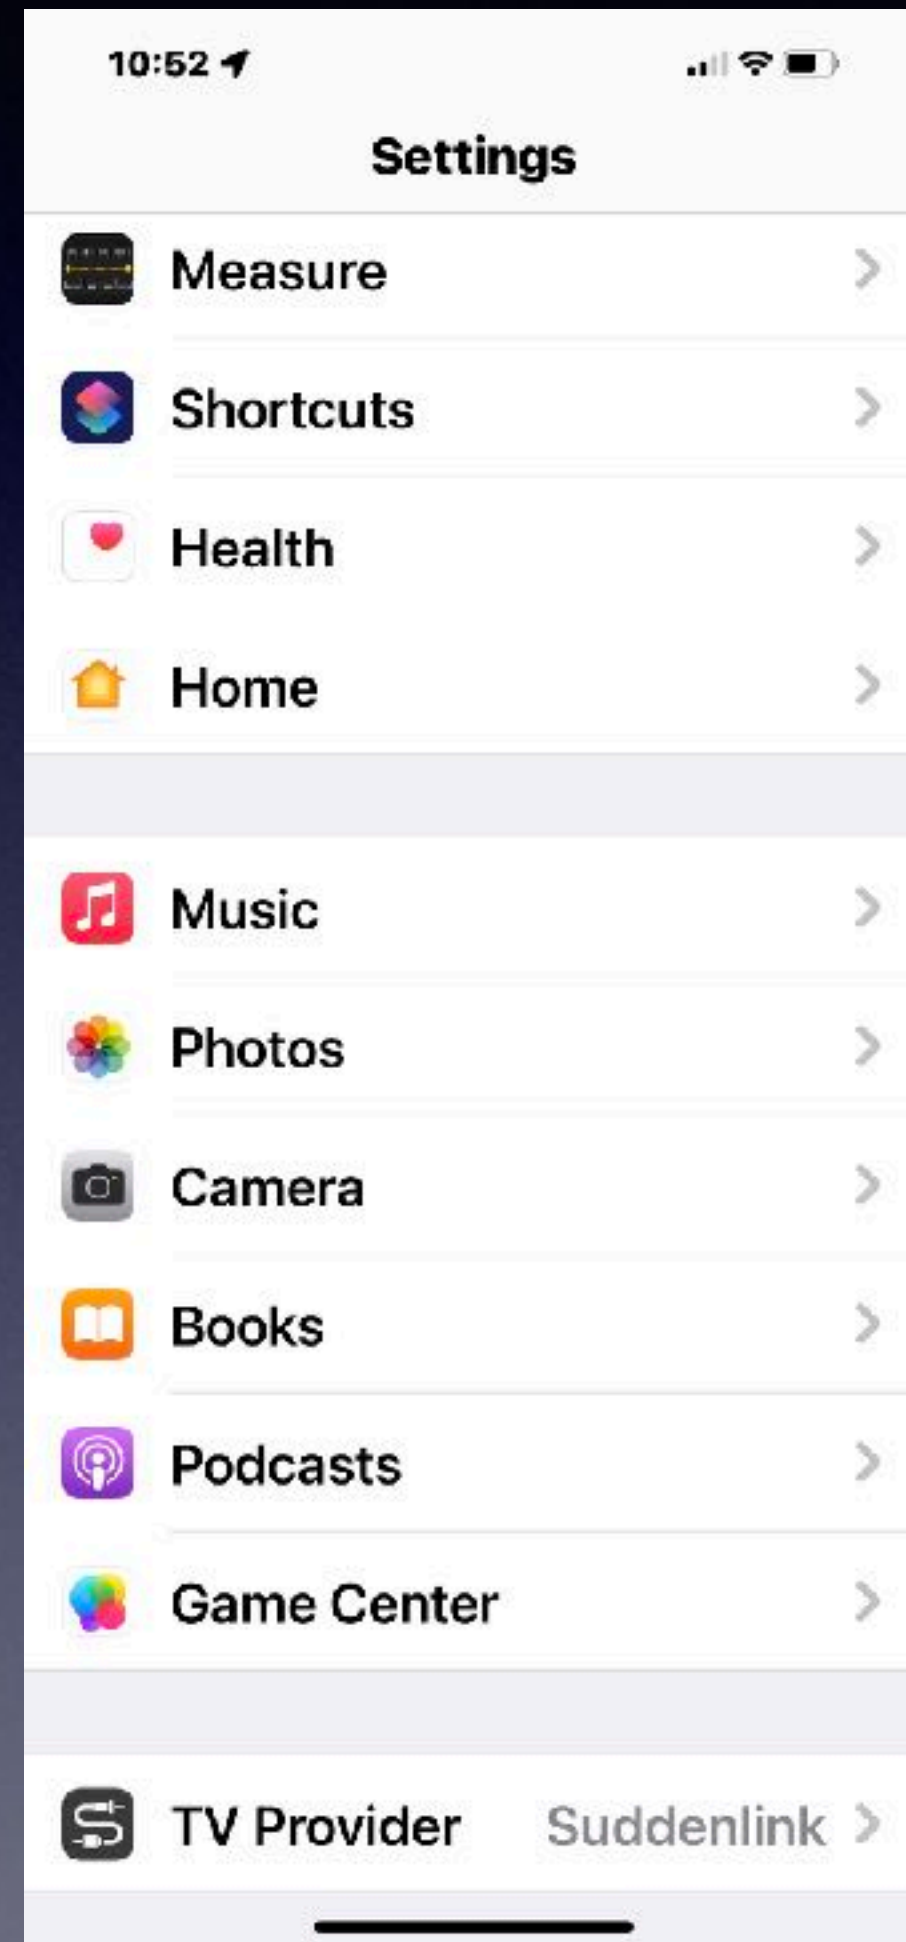

The Photos App!

Add a caption and get info!

What Format Of Photos Do You Want?

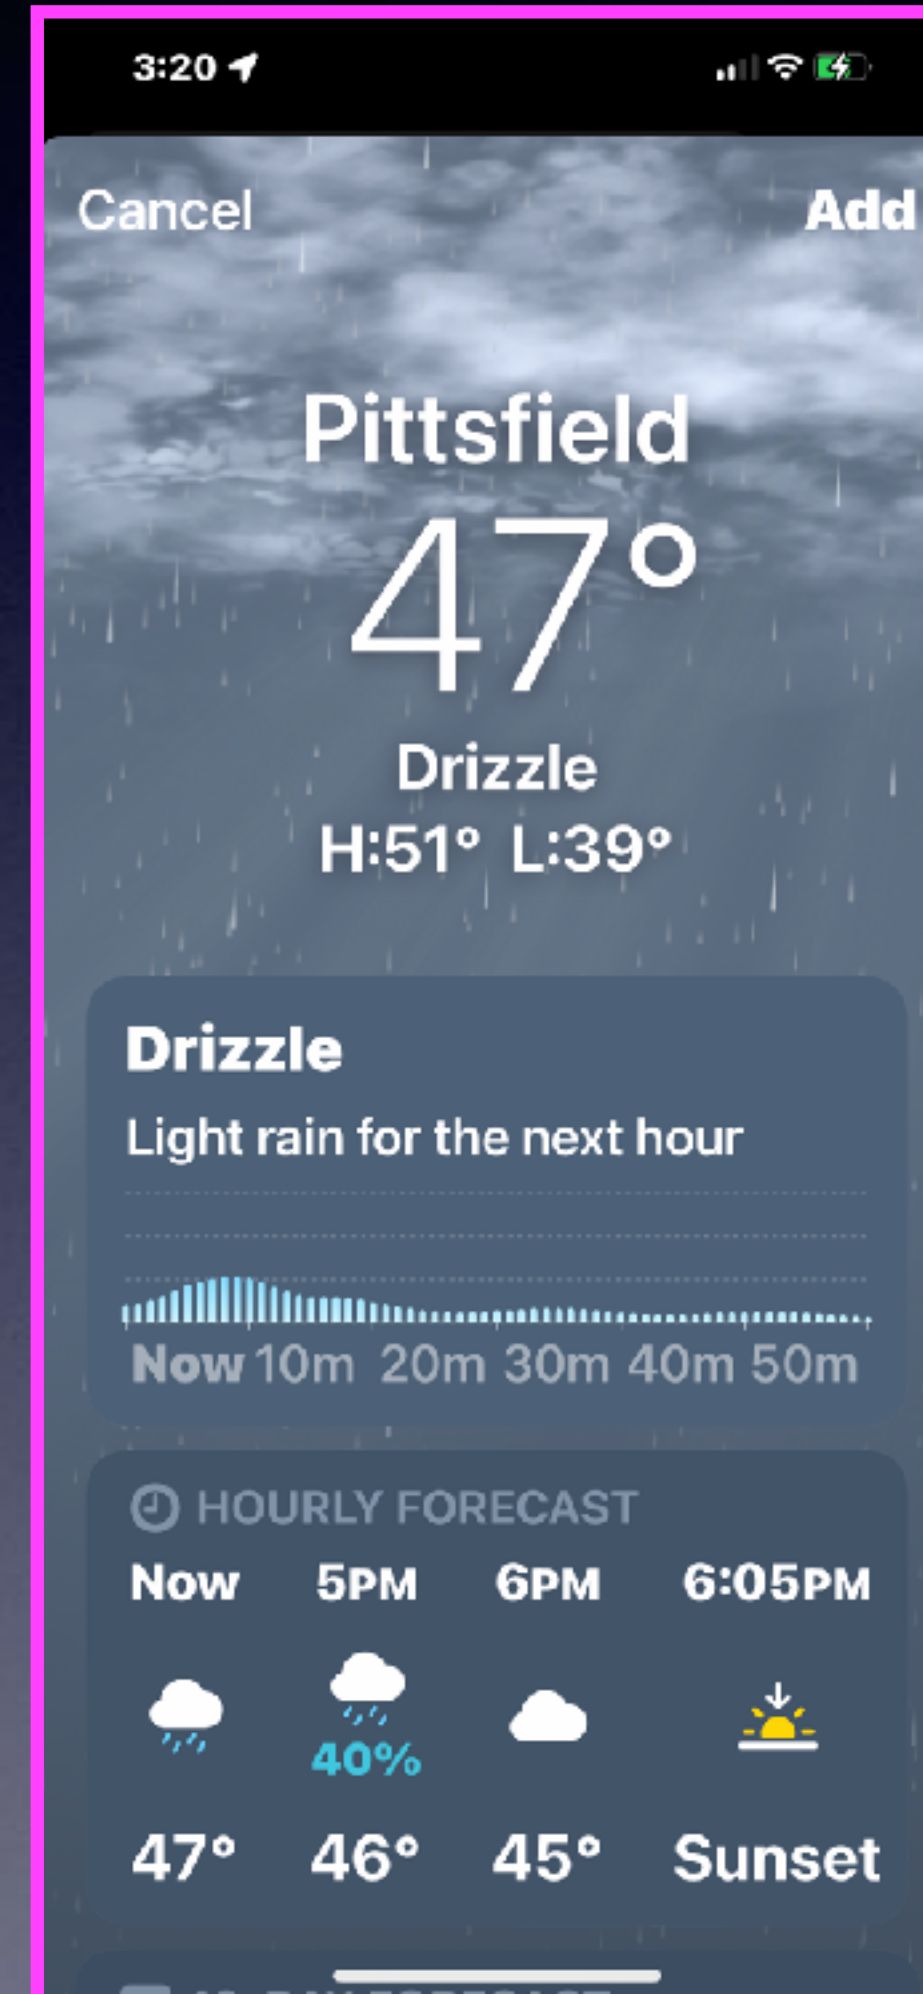

Some printer software cannot print HEIF/HEVC format.

For us shooting in JPEG is easy but takes up more space on iPhone Photos App.

The New Weather App!

Apple Purchased Dark Sky and incorporated into iOS!
